

Sink Faucet Rinsers

FOR 3/4" LAUNDRY TUB FAUCET: twist hose base (F) on the threads. Turn on water. Move sprayer lever to start water flow. (Please note extra parts enclosed are for use only on bath and kitchen faucets.)

FOR BATHROOM AND KITCHEN FAUCETS:

(15/16" outside aerator threads OR 55/64" inside aerator threads)

1. Remove the faucet's current aerator from spout (A).
2. If spout is threaded on the **outside**, place **thinner** washer only (B) inside enclosed aerator. If spout is threaded on the **inside**, place **thicker** washer only (C) inside enclosed aerator.
3. Twist aerator (D) onto spout (A). Aerator can stay permanently attached, if desired.
4. Twist "Quick Connector" (E) into hose base (F).
5. Align tabs on "Quick Connector" (E) with markings on aerator (D). With one hand, hold faucet for leverage and with other hand push quick-connector (E) into aerator (D). Turn hose clockwise a quarter turn until it stops then pull down slightly.
6. Turn on water slowly. Move toggle lever UP to start water flow. Adjust water flow by moving the easy-glide lever. **WHEN WATER IS TURNED ON, NEVER LEAVE HOSE UNATTENDED.** Always face sprayer away from your baby before checking water temperature on your hand and before spraying baby.
7. Turn off water before detaching hose. To detach hose, place one hand on faucet for leverage and use other hand to:
 - a. Push the hose up.
 - b. Turn the hose counterclockwise a quarter turn.
 - c. Pull down to detach hose from aerator

Small drips may occur from backside of aerator with some faucets when hose is not attached. This is normal.

Occasionally the aerator (D) becomes separated during shipping. If this happens to you, please call (800) 867- 4673 and we will help you reassemble the aerator. This will not affect the performance of the product.

Helpful Hints

- Lubricate black o-ring on quick connector if hose is difficult to plug into aerator.
- Drain water remaining in hose over sink by moving blue lever UP on sprayer.
